

Di-VentiX II in Matrix mode - Switch and Scale your sources independently or simultaneously on 2 separate display devices with true seamless transitions and effects

PRINCIPLE

- Centralize the configuration and operation of 2 screens from one single **Di-VentiX II**
- Centralize all sources on one unit with no need for additional distribution
- Match the native resolution of each display, since the output format is independent on the two outputs
- The **Di-VentiX II** is configured in Native Matrix mode
- Any source can be displayed on any screen
- Sources can be switched seamlessly on both outputs either simultaneously or independently

CONNECTIONS

- Output 1 is connected to a projector in 2K resolution (for example)
- Output 2 is connected to a plasma display in full HD (for example)
- Up to 8 Computer and Video sources can be connected to the device
- A control laptop and/or a remote control unit can be connected to the **Di-VentiX II** device through RS232 or TCP/IP

SWITCHING OPERATION

- In order to switch on each screen between any 2 sources, the commands can be sent directly from the front panel, through the remote control software or through a console
- The sources will be switched seamlessly, with true effects (cut, fade, wipe, etc...)

EQUIPMENT REQUIRED

- 1 x **Di-VentiX II**
- 2 x Displays (ai. 1 projector and 1 plasma screen)
- Up to 8 Computer and/or Video sources
- An optional remote control unit and/or a laptop with the remote control software

Application Notes for the Di-VentiX II

2048x1080 pixels - 2k resolution
Digital Cinema

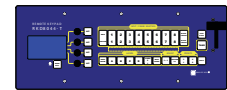

1920x1080 pixels - 16/9 Format
Live Video Display
